

1. Power down the bridge
2. On the side remove one of the screws covering the SD Card slot.
3. Loosen the second screw and rotate the cover. Press the SD card to release it and remove.
4. Plug the card into a computer. Navigate to >
5. Delete everything from that firmware folder and drop the new firmware file into that folder.
6. Safely eject the sd card. Place it back into the bridge, replace the screws, and power everything back up.
7. Once our interface has loaded go to Help -> firmware update -> select the new file (may take 10-15 minutes to load).
